MatterHackers Announces MatterControl 1.6 - The Most Innovative MatterControl Yet

Features Print Recovery System, Expanded Cloud Control, And Enhanced Settings Management

LAKE FOREST, CA - MatterHackers has released MatterControl 1.6, the most advanced MatterControl ever with an innovative Print Recovery system, expanded cloud control, and incredible enhancements to nearly every aspect of the user interface. MatterControl is a leading open-source 3D printer control software, and wildly popular with both beginner and power users. It is free and compatible with the majority of 3D printers.

Print Recovery

One of the most exciting and innovative features of MatterControl 1.6 is Print Recovery - a highly advanced tracking system that continuously monitors the state of your printer. With Print Recovery in place, MatterControl 1.6 is able to correct the most common failure conditions in 3D printing. It will detect - and correct - loss of connection, loss of power, even unrequested system updates. When something bad happens, MatterControl 1.6 can seamlessly resume your print right where it left off.

"MatterControl 1.6 is absolutely amazing because of our newly added Print Recovery. Print Recovery is the type of innovation 3D printing needs. It enables every user to have the confidence that no matter what, their prints will come out great! Power failures, disconnections, midnight system updates - are all easily handled with MatterControl Print Recovery," said Lars Brubaker, Chief Executive Officer of MatterHackers.

More Connected - Cloud Printer Profiles

MatterControl has always led the industry with connectivity features, including text notifications when your print is complete, the ability to start and stop prints from your phone, remote print monitoring, and keeping your digital designs with you wherever you go with Cloud Design Library. Now, within MatterControl Cloud Printer Profiles, existing printer profiles and settings are accessible across all platforms of MatterControl, from anywhere in the world. Alterations and updates to settings are automatically synced to the cloud, and

to every instance of MatterControl and MatterControl Touch that a user is logged into. With these improvements, MatterControl 1.6 truly is with you everywhere you go.

Settings Management

MatterControl 1.6 features improvements to the entire user interface, especially the printer settings management. In the improved slice settings editor, all settings changes are tracked and made easily visible to the user. This tracking allows for any setting to be reverted at any time to the printer's defaults - never again hesitate to test out new settings. There have also been significant improvements made to the print quality and material editors, making it a breeze to edit on the fly.

"MatterControl 1.6 is our most refined release yet, with enhancements to the core experience of managing printer settings, including automatic syncing across devices and the ability to restore previous versions," said Kevin Pope, MatterHackers co-founder and Chief Operating Officer. "With its many improvements, this update furthers MatterHackers' ongoing mission of making 3D printing more accessible and reliable for users of all experience levels."

Additional MatterControl 1.6 Improvements and Features

- Smarter, faster MatterSlice slicing engine with improved support detection, easier support removal (air gap), and quality enhancing seam hiding.
- New setup wizards that helps to guide printer setup, creating online accounts and optional step by step printer calibration.
- Manufacturers and users can easily create and share custom printer profiles.
